PROFILE

AI engineer with 1+ year of production experience shipping RAG and agentic LLM applications as FastAPI services, from retrieval design and data ingestion to API performance tuning and cloud deployment. Works directly with product and business stakeholders to turn requirements into deployed LLM features. Hands-on with LangChain, FAISS/Chroma, embeddings, prompt engineering, fine-tuning (LoRA/QLoRA) and LLMs (Gemini, LLaMA, Hugging Face, Groq). Microsoft-certified on the Foundry SDK presented at GHCI Hackathon 2025.

EDUCATION

Dr. Ambedkar Institute of Technology, Bangalore Dec 2023 – Sep 2025
Master of Computer Applications (MCA) - Data Structures & Algorithms, Database Systems, Machine Learning, Artificial Intelligence, NLP

BMS College Of Commerce & Management, Bangalore Aug 2020 – Aug 2023
Bachelor of Computer Applications (BCA)

WORK EXPERIENCE

VectorStack, Bangalore Sep 2025 – Present
AI/ML Engineer

- Built an end-to-end RAG chatbot using FastAPI and MongoDB for domain-specific QA; engineered custom temporal alignment algorithms that mapped transcripts to race events, boosting answer relevance from 70% to 88%.
- Developed and scaled backend infrastructure using Python and FastAPI to power a complex logistics shipping platform, achieving 99.9% API uptime across critical Admin and vendor onboarding services.
- Accelerated API end-to-end latency by 40% through strategic query optimization and data indexing, while successfully handling multi-source unstructured text ingestion pipelines.
- Worked directly with product and business stakeholders to turn requirements into working, deployed LLM-powered features.

Skypoint, Bangalore Mar 2024 – May 2024
AI Data Curation and RLHF Intern

- Automated RLHF data collection with Python and Selenium, improving collection efficiency by 30%; built preprocessing pipelines delivering 95% clean datasets for model training.
- Engineered data ingestion that cut processing time by 25%, saving 2 hours per training run.

SKILLS

LLM / GenAI: LangChain, RAG Architecture, Agentic AI, AI Agents, Tool/Function Calling, Prompt Engineering, Embeddings, Semantic Search, Chunking, LLM Evaluation, LangSmith (Tracing), Fine-tuning (LoRA, QLoRA, PEFT)
Models & Platforms: Microsoft Foundry SDK, Azure OpenAI, Gemini, LLaMA, Hugging Face Transformers, BERT
Vector Stores & Data: FAISS, Chroma, MongoDB, SQL, Data Ingestion / ETL Pipelines
Languages & Backend: Python, SQL, FastAPI, Flask, REST APIs, API Design, Caching, Query Optimization
Cloud & DevOps: Microsoft Azure, AWS, Docker, Git, GitHub
ML / NLP: NLP, Transformer Models, Deep Learning, Scikit-Learn, TensorFlow, Model Evaluation

PROJECTS

Agentic RAG Document QA Chatbot (Multi-Format)

- Built an agent-based RAG system in Python using LangChain + FAISS, retrieving across 100+ documents in PDF, DOCX, HTML and CSV as a reusable enterprise-search component.
- Built LLaMA-based retrievers and an embedding pipeline that raised extraction accuracy from 65% to 85% on an internal evaluation set; cut analyst document-search time by 70% in a pilot with 3 internal teams.

LLM-Powered Voice Assistant for Financial Transactions

- Engineered a secure voice assistant (Gemini + Google Speech-to-Text) for natural-language financial transactions, reaching 95%+ command recognition across 10 transaction types; presented at GHCI Hackathon 2025, Bangalore.

News Summarization & Sentiment Analysis

- Built a FastAPI NLP service aggregating news from 15+ sources with transformer-based summarization, plus comparative sentiment scoring and automated daily digests for 5 business stakeholders, reducing manual analysis time by 90%.

CERTIFICATIONS

- **Develop an AI app with the Microsoft Foundry SDK** - Microsoft Learn
- **Python for Data Science** (IIT Madras)
- **Python for Data Science, AI & Development** (IBM)
- **Machine Learning** (Simplilearn)

PUBLICATIONS & ACHIEVEMENTS

- **GHCI Hackathon 2025** presenter, Bangalore
- **LeetCode:** solved 150+ problems in data structures and algorithms.
- **2 journal publications:** Automated Timetable Generator System (constraint-based academic scheduling), Blog AI Project (AI-powered long form content generation).
